

Cows are notorious for eating anything they find in the field - also metal scraps. Furthermore, there is a risk of metal pieces in the feed. Consequently traumatic reticulitis can be a serious problem. However, if all cows are given a ruminal magnet they are well protected as the metal scraps will attach in the groove of the magnet. KRUUSE offers a wide assortment of FDA approved magnets in different sizes and strengths.

BOVIVET Ruminal Magnet

Our well-known BOVIVET ruminal magnets are recommended by veterinarians worldwide due to their excellent function. The magnets have the correct size, shape and weight to offer maximum protection against and treatment of traumatic indigestion in cattle. The correct length and deep grooves in the plastic cage provide extra protection from sharp, uneven pieces.

Cat. No	Description
142030	BOVIVET ruminal magnet, 10/pk
142035	BOVIMINI ruminal magnet, 10/pk

BOVIVET Ruminal Magnet, Extra Powerful

Treatment and prevention of traumatic reticulitis. Tests have showed significant reduction in occurrence of traumatic reticulitis in cows when ruminal magnets are used. The BOVIVET Mag II has a higher pulling resistance than a conventional magnet. 142050 BOVIVET magnet introducer plastic should be used as introducer for 142040.
